

Honda legend V6 with an Impco Air valve system.

System type: Impco Air Valve. The Air valve system is more efficient and less restrictive than the alternative Venturi or ring type of mixer systems. These come with an automatic petrol start and are controlled by a computer connected to the cars exhaust oxygen sensors creating a closed loop control system.

Cylinder: 60 litres of useable LPG in the boot against the back seat..

Controls: Gauge and switch combined in a unit fitted into dash.

Filler: As with all our jobs, if it is possible to fit the LPG filler in with the petrol filler then that is where we locate the filler. See photos for filler.

Disclaimer: We endeavour to get all our data correct but we do not guarantee that we are perfect and haven't made an error in some of the data.
With the injection systems we do change the brand we use where we can improve on the quality of the equipment fitted. We are not tied into one particular brand and we are entirely motivated by self-interest; we aren't compensated for the labour to replace parts under warranty. When we fit components we don't fit them for ease of replacement but for best performance and looks and then within the requirements of the standards. It is therefore in our interests as well as yours that we don't have to replace parts and so we make sure we fit the most reliable, long lived parts.
